How long does it take?

What is Process?

Blood Collected straight from the donor after its donation usually separated into red blood cells, platelets, and plasma.

Who can donate?

You need to be 18-65 years old, weigh 45kg or more and be fit and healthy.

User For?

Stomach disease, kidney disease, childbirth, operations, blood loss, trauma, cancer, blood diseases, haemophilia, anemia, heart disease.

Lasts For?

Red cells can be stored for 42 days.

How long does it take?

15 minutes to donate.

Donate Blood - Stay Healthy !

After donating blood, the body works to replenish the blood loss. This stimulates the production of new blood cells and in turn, helps in maintaining good health.

```

The image shows the Visual Studio Solution Explorer for a project named 'MyBank'. The project is expanded, showing its internal structure. The 'MyBank' project is a web application, as indicated by the 'wwwroot' folder and the 'Pages' folder. The 'Pages' folder contains several sub-folders: 'Clients', 'Feedback', and 'Inventory'. Each of these folders contains a 'Create.cshtml' file, an 'Index.cshtml' file, and a corresponding C# code file (e.g., 'Create.cshtml.cs', 'Index.cshtml.cs'). The 'Clients' folder also contains a 'Delete.cshtml' file. The 'Feedback' and 'Inventory' folders contain 'CreateModel' and 'IndexModel' files, respectively. The 'Clients' folder contains a 'ClientInfo' file. The 'Properties' folder is also visible. The 'Solution Explorer' tab is active, and the 'Git Changes' tab is visible below it. The 'Properties' window is open at the bottom of the screen.

FUTURE ENHANCEMENTS

- As soon as the donor gets updated his status from Registered to Donated, automatic certificate of his name should be ready.
- Number of blood units in the inventory should automatically increase or decreased when the donor with specific blood group is registered or donated.
- Admin access and online registration for users who are willing to donate, i.e., authentication must be developed.
